Amlodipine and Olmesartan Medoxomil Tablets

Type of Posting: Revision Bulletin
Posting Date: 26-Mar-2021
Official Date: 1-Apr-2021
Expert Committee: Small Molecules 2

In accordance with the Rules and Procedures of the Council of Experts, the Small Molecules 2 Expert Committee has revised the Amlodipine and Olmesartan Medoxomil Tablets monograph. The purpose for the revision is to add *Dissolution Test 4* to accommodate FDA-approved drug products with different dissolution conditions and/or tolerances than the existing dissolution test(s). The revision also necessitates a change in the table numbering in the test for *Organic Impurities*.

* Dissolution Test 4 was validated using the Thermo Scientific Hypersil BDS C8 brand of column with L7 packing. The typical retention times for amlodipine and olmesartan medoxomil are about 4.9 and 6.6 min, respectively.

The Amlodipine and Olmesartan Medoxomil Tablets Revision Bulletin supersedes the currently official monograph.

Should you have any questions, please contact Yanyin Yang, Scientific Liaison (301-692-3623 or yanyin.yang@usp.org).

\( M_{r2} \) = molecular weight of amlodipine besylate, 567.05

Calculate the percentage of olmesartan or any unspecified olmesartan medoxomil related impurity in the portion of Tablets taken:

\[
\text{Result} = \left( \frac{r_U}{r_S} \right) \times \left( \frac{C_S}{C_U} \right) \times 100
\]

\( r_U \) = peak response of olmesartan or any unspecified olmesartan medoxomil related impurity from the Sample solution
\( r_S \) = peak response of olmesartan medoxomil from the Standard solution
\( C_S \) = concentration of USP Olmesartan Medoxomil RS in the Standard solution (mg/mL)
\( C_U \) = nominal concentration of olmesartan medoxomil in the Sample solution (mg/mL)
