In accordance with the Rules and Procedures of the Council of Experts and the Pending Monograph Guideline, this is to provide notice that the Small Molecules 4 Expert Committee intends to revise the Carbamazepine Extended-Release Tablets monograph.

Based on the supporting data received from a manufacturer awaiting FDA approval, the Expert Committee proposes to revise the Carbamazepine Extended-Release Tablets monograph to add *Dissolution Test 8*.

The proposed revision is contingent on FDA approval of a product that meets the proposed monograph specifications. The proposed revision will be published as a Revision Bulletin and an official date will be assigned to coincide as closely as possible with the FDA approval of the associated product.

See below for additional information about the proposed text.[1]

[1] This text is not the official version of a *USP–NF* monograph and may not reflect the full and accurate contents of the currently official monograph. Please refer to the current edition of the *USP–NF* for official text.

USP provides this text to indicate changes that we anticipate will be made official once the product subject to this proposed revision under the Pending Monograph Program receives FDA approval. Once FDA approval is granted for the associated revision request, a Revision Bulletin will be posted that will include the changes indicated herein, as well as any changes indicated in the product's final approval, combined with the text of the monograph as effective on the date of approval. Any revisions made to a monograph under the Pending Monograph Program that are posted without prior publication for comment in the *Pharmacopeial Forum* must also meet the requirements outlined in the USP Guideline on Use of Accelerated Processes for Revisions to the *USP–NF.*

Carbamazepine Extended-Release Tablets

DEFINITION
Carbamazepine Extended-Release Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of carbamazepine ($C_{15}H_{12}N_2O$).

IDENTIFICATION
- **A. Spectroscopic Identification Tests** ⟨197⟩*, Ultraviolet-Visible Spectroscopy*: 197U

    Standard solution: 10 μg/mL of USP Carbamazepine RS in methanol

    Sample solution: Finely powder 1 Tablet, and quantitatively transfer the powder, with the aid of methanol, to a 100-mL volumetric flask. Add about 70 mL of methanol, and shake by mechanical means for 60 min. Sonicate for 15 min, and dilute with methanol to volume. Allow to stand for 10–15 min. Dilute a portion of the clear solution with methanol to obtain a solution containing about 10 μg/mL of carbamazepine.

    Acceptance criteria: Meet the requirements
- **B.** The retention time of the major peak of the *Sample solution* corresponds to that of the *Standard solution*, as obtained in the *Assay*.

ASSAY

The percentages of the labeled amount of carbamazepine ($C_{15}H_{12}N_2O$) dissolved at the times specified conform to *Dissolution ⟨711⟩, Acceptance Table 2*. ▲ (TBD)

- **UNIFORMITY OF DOSAGE UNITS ⟨905⟩:** Meet the requirements

IMPURITIES

- **ORGANIC IMPURITIES: PROCEDURE 1**

Mobile phase: Methanol, methylene chloride, and water (450:45:600)

System suitability solution: 60 µg/mL of phenytoin and 20 µg/mL of USP Carbamazepine RS in methanol

Standard solution: 4 µg/mL of USP Carbamazepine RS in methanol

Sample solution: Use *Sample stock solution A* from the *Assay*.

Chromatographic system and **System suitability:** Proceed as directed in the *Assay*.

Analysis

  Samples: *Standard solution* and *Sample solution*

    Calculate the percentage of each impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

    r_U = peak response of each impurity from the *Sample solution*

    r_S = peak response of carbamazepine from the *Standard solution*

    C_S = concentration of USP Carbamazepine RS in the *Standard solution* (mg/mL)

    C_U = nominal concentration of carbamazepine in the *Sample solution* (mg/mL)

Acceptance criteria

  Any individual unspecified degradation product: NMT 0.2%

- **ORGANIC IMPURITIES: PROCEDURE 2**

Mobile phase: Methanol, acetonitrile, and water (35:15:50)

System suitability solution: 12.5 µg/mL of iminostilbene and 5.0 µg/mL of USP Carbamazepine RS in methanol

Standard solution: 4 µg/mL of USP Carbamazepine RS in methanol

Sample solution: Use *Sample stock solution A* from the *Assay*.

Chromatographic system: Proceed as directed in the *Assay*.

System suitability

  Sample: *System suitability solution*

  [NOTE—The relative retention times for carbamazepine and iminostilbene are about 0.3 and 1.0, respectively.]

  Suitability requirements

    Resolution: NLT 10.0 between carbamazepine and iminostilbene

    Relative standard deviation: NMT 2.0%

Analysis

  Samples: *Standard solution* and *Sample solution*

    Calculate the percentage of each impurity in the portion of Tablets taken:

$$\text{Result} = (r_U/r_S) \times (C_S/C_U) \times 100$$

    r_U = peak response of each impurity from the *Sample solution*

    r_S = peak response of carbamazepine from the *Standard solution*

    C_S = concentration of USP Carbamazepine RS in the *Standard solution* (mg/mL)

    C_U = nominal concentration of carbamazepine in the *Sample solution* (mg/mL)

Acceptance criteria

  Any individual unspecified degradation product: NMT 0.2%

  Total impurities: NMT 0.5% for all impurities from *Procedure 1* and *Procedure 2*.

ADDITIONAL REQUIREMENTS

- **PACKAGING AND STORAGE:** Preserve in tight containers, and store at controlled room temperature.

- **LABELING:** The labeling states the *Dissolution* test used only if *Test 1* is not used.
- **USP REFERENCE STANDARDS** ⟨11⟩
