Carbidopa and Levodopa Extended-Release Tablets

Type of Posting  Notice of Intent to Revise
Posting Date  26–Oct–2018
Targeted Official Date  To Be Determined, Revision Bulletin
Expert Committee  Chemical Medicines Monographs 4

In accordance with section 7.04 (c) of the 2015–2020 Rules and Procedures of the Council of Experts and the Pending Monograph Guideline, this is to provide notice that the Chemical Medicines Monographs 4 Expert Committee intends to revise the Carbidopa and Levodopa Extended-Release Tablets monograph.

Comments with supporting data were received that indicate that the existing dissolution tests are not suitable for all relevant drug products. The Expert Committee proposes to revise the Carbidopa and Levodopa Extended-Release Tablets monograph to add Dissolution Test 7 to accommodate drug products that are anticipated to be approved with different dissolution conditions and tolerances. Additionally, the chemical name for levodopa related compound A and the table number within the test for Organic Impurities were updated.

- **Dissolution Test 7** was validated using a Hypersil BDS C18 brand of column with L1 packing. The typical retention times for levodopa and carbidopa are about 2.6 and 5.3 min, respectively.

The proposed revision is contingent on FDA approval of a product that meets the proposed monograph specifications. The proposed revision will be published as a Revision Bulletin and an official date will be assigned to coincide as closely as possible with the FDA approval of the associated product.

See below for additional information about the proposed text.¹

Should you have any questions, please contact Heather Joyce, Ph.D., Senior Scientific Liaison to the Chemical Medicines Monographs 4 Expert Committee (301-998-6792 or hraj@usp.org).

¹ This text is not the official version of a USP–NF monograph and may not reflect the full and accurate contents of the currently official monograph. Please refer to the current edition of the USP–NF for official text.

USP provides this text to indicate changes that we anticipate will be made official once the product subject to this proposed revision under the Pending Monograph Program receives FDA approval. Once FDA approval is granted for the associated revision request, a Revision Bulletin will be posted that will include the changes indicated herein, as well as any changes indicated in the product’s final approval, combined with the text of the monograph as effective on the date of approval. Any revisions made to a monograph under the Pending Monograph Program that are posted without prior publication for comment in the Pharmacopeial Forum must also meet the requirements outlined in the USP Guideline on Use of Accelerated Processes for Revisions to the USP–NF.
Carbidopa and Levodopa Extended-Release Tablets

**DEFINITION**
Carbidopa and Levodopa Extended-Release Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of carbidopa (C₈H₈N₂O₄) and levodopa (C₇H₇NO₃).

**IDENTIFICATION**
- **A.** The retention times of the major peaks of the Sample solution correspond to those of the Standard solution, as obtained in the Assay.

**ASSAY**

**Change to read:**
- **PROEDURE**
  - Protect the volumetric preparations from light.
  - **Solution A:** 0.24 g/L of sodium 1-decanesulphonate in water
  - **Solution B:** 11.6 g/L of monobasic sodium phosphate in water
  - **Mobile phase:** Solution A, Solution B, and water (0.13: 95: 4.87), prepared as follows. Add 0.13% of the final volume of Solution A to 95% of the final volume of Solution B. Adjust with phosphoric acid to a pH of 2.8. Dilute with water to final volume.
  - **Standard solution:** 0.1 mg/mL of USP Carbidopa RS and 0.4 mg/mL of USP Levodopa RS in solution, prepared as follows. Transfer accurately weighed portions of the Reference Standards into a suitable volumetric flask, and dissolve in 0.1 N phosphoric acid using 8% of the final volume. Sonicate for 10 min and then stir for 30 min. Dilute with water to final volume.
  - **Sample solution:** Nominally 0.1 mg/mL of carbidopa and 0.4 mg/mL of levodopa from NLT 20 finely powdered Tablets, prepared as follows. Transfer an accurately weighed portion of the powder, equivalent to 1 Tablet weight, into a suitable volumetric flask, and dissolve in 0.1 N phosphoric acid, using 10% of the final volume. Sonicate for 10 min and then stir for another 20 min. Pass the solution through a suitable filter of 0.45-µm pore size.
  - **Chromatographic system**
    - (See Chromatography (621), System Suitability.)
    - **Mode:** LC
    - **Detector:** UV 280 nm. For Identification B, use a diode array detector in the range of 200–350 nm.
    - **Column:** 4.6-mm × 10-cm; 5-µm packing L1
    - **Flow rate:** 2 mL/min
    - **Injection volume:** 20 µL
  - **Run time:** NLT 4 times the retention time of levodopa
  - **System suitability**
    - **Sample:** Standard solution
    - [Note—The relative retention times for levodopa and carbidopa are 1.0 and 2.8, respectively.]
  - **Suitability requirements**
    - **Tailing factor:** NMT 1.5 for carbidopa; NMT 1.5 for levodopa
    - **Resolution:** NLT 6 between levodopa and carbidopa
    - **Relative standard deviation:** NMT 1.0% for carbidopa; NMT 1.0% for levodopa

**Analysis**

- **Samples:** Standard solution and Sample solution
  - Calculate the percentage of the labeled amount of carbidopa (C₈H₈N₂O₄) or levodopa (C₇H₇NO₃) in the portion of Tablets taken:
    \[ \text{Result} = \left( \frac{r_u}{r_s} \right) \times \left( \frac{C_s}{C_u} \right) \times 100 \]
  - \( r_u \) = peak response of carbidopa or levodopa from the Sample solution
  - \( r_s \) = peak response of carbidopa or levodopa from the Standard solution
  - \( C_s \) = concentration of USP Carbidopa RS or USP Levodopa RS in the Standard solution (mg/mL)
  - \( C_u \) = nominal concentration of carbidopa or levodopa in the Sample solution (mg/mL)

**Acceptance criteria:** 90.0%–110.0% each of the labeled amounts of carbidopa and levodopa

**PERFORMANCE TESTS**

**Change to read:**
- **Dissolution (711)**

**Test 1**
- **Medium:** 0.1 N hydrochloric acid; 900 mL degassed with helium

**Apparatus 2:** 50 rpm

- **Times**
  - For Tablets that contain 25 mg of carbidopa and 100 mg of levodopa: 0.5, 1, and 4 h
  - For Tablets that contain 50 mg of carbidopa and 200 mg of levodopa: 0.5, 1, 2.5, and 4 h

  **Solution A:** 0.24 g/L of sodium 1-decanesulphonate in water

  **Solution B:** 12.7 g/L of monobasic sodium phosphate in water

- **Mobile phase:** Solution A, Solution B, and water (0.13: 95: 4.87), prepared as follows. Add 0.13% of the final volume of Solution A to 95% of the final volume of Solution B. Adjust with phosphoric acid to a pH of 2.8. Dilute with water to final volume.

- **Standard solution:** 0.03 mg/mL of USP Carbidopa RS and 0.1 mg/mL of USP Levodopa RS in solution, prepared as follows. Transfer an accurately weighed portion of Tablets taken:
  - Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size, and discard the first 1–3 mL.

- **Sample solution**
  - For Tablets that contain 25 mg of carbidopa and 100 mg of levodopa: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size and discard the first 1–3 mL.
  - For Tablets that contain 50 mg of carbidopa and 200 mg of levodopa: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size, discard the first 1–3 mL, and dilute with Medium (50:50).

**Chromatographic system**
- (See Chromatography (621), System Suitability.)
- **Mode:** LC
- **Detector:** UV 280 nm
- **Column:** 3.9-mm × 30-cm; 10-µm packing L1
- **Flow rate:** 2 mL/min
- **Injection volume:** 20 µL
  - **Run time:** NLT 3 times the retention time of levodopa
- **System suitability**
  - **Sample:** Standard solution
    - [Note—The relative retention times for levodopa and carbidopa are 0.4 and 1.0, respectively.]

© The United States Pharmacopeial Convention All Rights Reserved.
2 Carbidopa

Suitability requirements

Resolution: NLT 2.0 between levodopa and carbidopa
Relative standard deviation: NMT 2.0% for carbidopa and NMT 2.0% for levodopa for six replicate injections

Analysis

Samples: Standard solution and Sample solution
Calculate the concentration (C) of carbidopa (C\textsubscript{10}H\textsubscript{14}N\textsubscript{2}O\textsubscript{4}) or levodopa (C\textsubscript{9}H\textsubscript{11}NO\textsubscript{4}) in the sample withdrawn from the vessel at each time point (t):

\[
\text{Result} = (\frac{r_u}{r_s}) \times C \times D
\]

\(r_u\) = peak response of carbidopa or levodopa from the Sample solution
\(r_s\) = peak response of carbidopa or levodopa from the Standard solution

\(C\) = concentration of USP Carbidopa RS or USP Levodopa RS in the Standard solution (mg/mL)

\(D\) = dilution factor for the Sample solution, if needed

Calculate the percentage of the labeled amount of carbidopa (C\textsubscript{10}H\textsubscript{14}N\textsubscript{2}O\textsubscript{4}) or levodopa (C\textsubscript{9}H\textsubscript{11}NO\textsubscript{4}) dissolved at each time point (i):

\[
\text{Result}_i = C \times V \times (1/L) \times 100
\]

\[
\text{Result}_1 = [(C \times (V - V_s)) + (C_L \times V_s)] \times (1/L) \times 100
\]

\[
\text{Result}_2 = [(C \times (V - 2 \times V_s)) + (C_L \times V_s)] \times (1/L) \times 100
\]

\[
\text{Result}_3 = [(C \times (V - 3 \times V_s)) + (C_L \times V_s)] \times (1/L) \times 100
\]

\(C\) = concentration of carbidopa or levodopa in the portion of sample withdrawn at time point i (mg/mL)
\(V\) = volume of the Medium, 900 mL
\(L\) = label claim of carbidopa or levodopa (mg/Tablet)
\(V_s\) = volume of the Sample solution withdrawn from the Medium (mL)

Tolerances

For Tablets that contain 25 mg of carbidopa and 100 mg of levodopa: See Table 1.

Table 1

The percentages of the labeled amounts of carbidopa (C\textsubscript{10}H\textsubscript{14}N\textsubscript{2}O\textsubscript{4}) and levodopa (C\textsubscript{9}H\textsubscript{11}NO\textsubscript{4}) dissolved at the times specified conform to Dissolution (711), Acceptance Table 2.

Test 2: If the product complies with this test, the labeling indicates that it meets USP Dissolution Test 2.

Medium: Simulated gastric fluid TS (prepared without enzymes); 900 mL

Apparatus 2: 50 rpm

Times: 0.5, 1, 2, and 3 h

Buffer: 6.8 g/L of monobasic potassium phosphate and 1.0 g/L of 1-hexanesulfonic acid in water. Adjust with phosphoric acid to a pH of 3.3.

Mobile phase: Filtered and degassed mixture of methanol and Buffer (20:80)

Standard solution: (L/900) mg/mL each of USP Carbidopa RS and USP Levodopa RS in Medium, where L is the label claim, in mg/Tablet

Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size.

Chromatographic system

(See Chromatography (621), System Suitability.)

Mode: LC

Detector: UV 280 nm

Column: 4.6-mm × 15-cm; 5-µm packing L7

Flow rate: 1 mL/min

Injection volume: 20 µL

*Run time: NLT 2.5 times the retention time of levodopa (15 USP41)

System suitability

Sample: Standard solution

[NOTE—The relative retention times for levodopa and carbidopa are 1.0 and 1.4, respectively.]

Suitability requirements

Resolution: NLT 2.0 between levodopa and carbidopa

Column efficiency: NLT 4000 theoretical plates for both carbidopa and levodopa

Tailing factor: NMT 2.0 for both carbidopa and levodopa

Relative standard deviation: NMT 1.0% for both carbidopa and levodopa

Analysis

Samples: Standard solution and Sample solution

Calculate the concentration (C) of carbidopa (C\textsubscript{10}H\textsubscript{14}N\textsubscript{2}O\textsubscript{4}) or levodopa (C\textsubscript{9}H\textsubscript{11}NO\textsubscript{4}) in the sample withdrawn from the vessel at each time point (t):

\[
\text{Result} = (\frac{r_u}{r_s}) \times C
\]

\(r_u\) = peak response of carbidopa or levodopa from the Sample solution
\(r_s\) = peak response of carbidopa or levodopa from the Standard solution

\(C\) = concentration of USP Carbidopa RS or USP Levodopa RS in the Standard solution (mg/mL)

Calculate the percentage of the labeled amount of carbidopa (C\textsubscript{10}H\textsubscript{14}N\textsubscript{2}O\textsubscript{4}) or levodopa (C\textsubscript{9}H\textsubscript{11}NO\textsubscript{4}) dissolved at each time point (i):
If the product complies with this test, the labeling
Test 3:  
\[ V = \text{label claim of carbidopa or levodopa (mg/Tablet)} \]
\[ L = \text{volume of the Medium, 900 mL} \]
\[ V_s = \text{volume of the Sample solution withdrawn from the Medium (mL)} \]

**Tolerances:** See Table 3.

The percentages of the labeled amounts of carbidopa (C_{10}H_{12}N_{2}O_{2}) and levodopa (C_{10}H_{9}NO_{2}) dissolved at the times specified conform to Dissolution (711), Acceptance Table 2.

Test 5: If the product complies with this test, the labeling indicates that it meets USP Dissolution Test 5.

Medium: 0.1 N hydrochloric acid; 900 mL

Apparatus 2: 50 rpm

Times: 0.5, 1, 2.5, and 4 h

Mobile phase: 13.6 g/L of monobasic potassium phosphate adjusted with phosphoric acid to a pH of 3.0

Standard solution: (L/900) mg/mL each of USP Carbidopa RS and USP Levodopa RS in Medium, where L is the label claim, in mg/Tablet. [NOTE—This solution is stable for 1 day if stored at 23°–27°.]

Sample solution: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size, and discard the first 4–5 mL. [NOTE—This solution is stable for 1 day if stored at 23°–27°.]

Chromatographic system

(See Chromatography (621), System Suitability.)

Mode: LC

Detector: UV 280 nm

Column: 4.6-mm × 15-cm; 5-µm packing L7

Flow rate: 1.5 mL/min

Injection volume: 20 µL

Run time: NLT 3 times the retention time of levodopa

System suitability

Sample: Standard solution

[NOTE—The relative retention times for levodopa and carbidopa are 1.0 and 1.6, respectively.]

Suitability requirements

Resolution: NLT 2.0 between levodopa and carbidopa

Tailing factor: NMT 2.0 for both carbidopa and levodopa

Relative standard deviation: NMT 2.0% for both carbidopa and levodopa

Analysis

Samples: Standard solution and Sample solution

Calculate the concentration (C) of carbidopa (C_{10}H_{12}N_{2}O_{2}) or levodopa (C_{10}H_{9}NO_{2}) in the sample withdrawn from the vessel at each time point (t):

Result = (r_0/r_1) × C_t

r_0 = peak response of carbidopa or levodopa from the Sample solution

r_1 = peak response of carbidopa or levodopa from the Standard solution

C_t = concentration of USP Carbidopa RS or USP Levodopa RS in the Standard solution (mg/mL)

Calculate the percentage of the labeled amount of carbidopa (C_{10}H_{12}N_{2}O_{2}) or levodopa (C_{10}H_{9}NO_{2}) dissolved at each time point (t):

Result = C_t × V/(V × (1/L)) × 100

Result = [(C_t × (V − V_0)) + (C_0 × V_0)] × (1/L) × 100

Result = [(C_t × (V − (2 × V_0))) + (C_0 × V_0)] × (1/L) × 100

Result = [(C_t × (V − (3 × V_0))) + (C_0 × V_0)] × (1/L) × 100

C_t = concentration of carbidopa or levodopa in the portion of sample withdrawn at time point t (mg/mL)

V = volume of the Medium, 900 mL

L = label claim of carbidopa or levodopa (mg/Tablet)

V_0 = volume of the Sample solution withdrawn from the Medium (mL)

The percentages of the labeled amounts of carbidopa (C_{10}H_{12}N_{2}O_{2}) and levodopa (C_{10}H_{9}NO_{2}) dissolved at the times specified conform to Dissolution (711), Acceptance Table 2.

Test 6: If the product complies with this test, the labeling indicates that it meets USP Dissolution Test 6.

Medium: 0.1 N hydrochloric acid; 900 mL degassed under vacuum

Apparatus 1: 75 rpm

Times: 0.5, 1, 2.5, and 3.5 h

Solution A: 0.24 g/L of sodium 1-decanesulfonate in water

Mobile phase: To each liter of 12.5 g/L of monobasic potassium phosphate adjusted with phosphoric acid to a pH of 2.8, add 1.3 mL of Solution A and adjust with phosphoric acid to a pH of 2.8.

Standard solution: 0.03 mg/mL of USP Carbidopa RS and 0.11 mg/mL of USP Levodopa RS in Medium

Sample solution

For Tablets that contain 25 mg of carbidopa and 100 mg of levodopa: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size, discard the first 2 mL, and use the remaining filtrate.

Use within 24 h.

For Tablets that contain 50 mg of carbidopa and 200 mg of levodopa: Pass a portion of the solution under test through a suitable filter of 0.45-µm pore size, discard the first 2 mL, and dilute with Medium (50:50).

Use within 24 h.

Chromatographic system

(See Chromatography (621), System Suitability.)

Mode: LC

Detector: UV 280 nm
The percentages of the labeled amounts of carbidopa \((C_{10}H_{14}N_2O_2)\) and levodopa \((C_9H_{11}NO_4)\) dissolved at the times specified conform to Dissolution (711), Acceptance Table 2.

*Test 7:* If the product complies with this test, the labeling indicates that it meets USP Dissolution Test 7. Protect the analytical solutions from light.

**Medium:** 0.1 N hydrochloric acid VS; 900 mL

**Apparatus 2:** 50 rpm

**Times:** 0.5, 1, 1.5, and 4 h

**Buffer:** 6.0 g/L of anhydrous monobasic sodium phosphate in water adjusted with diluted phosphoric acid to a pH of 2.2

**Mobile phase:** Alcohol and Buffer (4:96)

**Standard solution:** \((L/900)\) mg/mL each of USP Carbidopa RS and USP Levodopa RS prepared as follows, where \(L\) is the label claim, in mg/Tablet. Transfer suitable quantities of USP Carbidopa RS and USP Levodopa RS to an appropriate volumetric flask and add 70% of the flask volume of Medium. Sonicate to dissolve, and allow the solution to cool to room temperature. Dilute with Medium to volume.

**Sample solution:** Withdraw a 10-mL aliquot at each time point and pass a portion of the solution under test through a suitable filter. Replace the 10-mL aliquot withdrawn for analysis with a 10-mL aliquot of Medium.

### Chromatographic system

(See Chromatography (621), System Suitability.)

**Mode:** LC

**Detector:** UV 280 nm

**Column:** 4.6-mm × 15-cm; 5-µm packing L1

**Autosampler temperature:** 6° C

**Flow rate:** 1 mL/min

**Injection volume:** 20 µL

**Run time:** NLT 3 times the retention time of levodopa

#### System suitability

**Sample:** Standard solution

[Note—The relative retention times for levodopa and carbidopa are 1.0 and 2.0, respectively.]

**Suitability requirements**

- **Resolution:** NLT 2.0 between levodopa and carbidopa
- **Tailing factor:** NMT 1.5 for both carbidopa and levodopa
- **Relative standard deviation:** NMT 2.0% for both levodopa and carbidopa

#### Analysis

**Samples:** Standard solution and Sample solution

Calculate the concentration \((C)\) of carbidopa \((C_{10}H_{14}N_2O_2)\) or levodopa \((C_9H_{11}NO_4)\) in the sample withdrawn from the vessel at each time point \((t)\):

\[
Result = \left( \frac{r_d}{r_s} \right) \times C_S \times D
\]

- \(r_d\) = peak response of carbidopa or levodopa from the Sample solution
- \(r_s\) = peak response of carbidopa or levodopa from the Standard solution
- \(C_S\) = concentration of USP Carbidopa RS or USP Levodopa RS in the Standard solution (mg/mL)
- \(D\) = dilution factor for the Sample solution, if needed

Calculate the percentage of the labeled amount of carbidopa \((C_{10}H_{14}N_2O_2)\) or levodopa \((C_9H_{11}NO_4)\) dissolved at each time point \((t)\):

\[
Result_1 = C_1 \times V \times \left( \frac{1}{L} \right) \times 100
\]

\[
Result_2 = \left( \left[ C_1 \times \left( V - (2 \times V_s) \right) + \left[ C_1 + C_2 + C_3 \right] \times V_s \right] \times \left( \frac{1}{L} \right) \right) \times 100
\]

\[
Result_3 = \left( \left[ C_1 \times \left( V - (3 \times V_s) \right) + \left[ C_1 + C_2 + C_3 \right] \times V_s \right] \times \left( \frac{1}{L} \right) \right) \times 100
\]

- \(C_i\) = concentration of carbidopa or levodopa in the portion of sample withdrawn at time point \(i\) (mg/mL)
- \(V\) = volume of the Medium, 900 mL
- \(L\) = label claim of carbidopa or levodopa (mg/Tablet)
- \(V_s\) = volume of the Sample solution withdrawn from the Medium (mL)

#### Tolerances

See Table 7.

### Table 7

The percentages of the labeled amounts of carbidopa \((C_{10}H_{14}N_2O_2)\) and levodopa \((C_9H_{11}NO_4)\) dissolved at the times specified conform to Dissolution (711), Acceptance Table 2.

\[
Result_1 = C_1 \times V \times \left( \frac{1}{L} \right) \times 100
\]

\[
Result_2 = \left( \left[ C_1 \times \left( V - (2 \times V_s) \right) + \left[ C_1 + C_2 + C_3 \right] \times V_s \right] \times \left( \frac{1}{L} \right) \right) \times 100
\]

\[
Result_3 = \left( \left[ C_1 \times \left( V - (3 \times V_s) \right) + \left[ C_1 + C_2 + C_3 \right] \times V_s \right] \times \left( \frac{1}{L} \right) \right) \times 100
\]
6 Carbidopa

Result, \( r_s \) = \([C_s \times V] + [(C_s + C_c) \times V_j] \times (1/L) \times 100 \)

Result, \( r_L \) = \([C_L \times V] + [(C_L + C_c + C_s) \times V_j] \times (1/L) \times 100 \)

\( C_s \) = concentration of carbidopa or levodopa in the portion of sample withdrawn at time point \( i \) (mg/mL)

\( V \) = volume of the Medium, 900 mL

\( V_j \) = volume of the Sample solution withdrawn from the vessel and replaced with Medium, 10 mL

Tolerances: See Table 8.

The percentages of the labeled amount of carbidopa \((C_{10}H_8N_2O_3)\) and levodopa \((C_9H_7NO)\) dissolved at the times specified conform to Dissolution (711), Acceptance Table 2. ▲ (TBD)

**UNIFORMITY OF DOSAGE UNITS** (905): Meet the requirements

### IMPURITIES

**Change to read:**

- **ORGANIC IMPURITIES**
  
  Protect all analytical solutions from light and maintain them at 2°–8° until they are injected.

  **Buffer:** 6 g/L of anhydrous monobasic sodium phosphate in water. Adjust with phosphoric acid to a pH of 2.2.

  **Mobile phase:** Alcohol and Buffer (5:95)

  **System suitability solution:** 1 µg/mL of USP Levodopa Related Compound B RS and 125 µg/mL of USP Carbidopa RS in Mobile phase.

  **Standard solution:** 1.25 µg/mL of USP Carbidopa RS and 5 µg/mL of USP Levodopa RS in Mobile phase.

  **Sensitivity solution:** 0.125 µg/mL of USP Carbidopa RS and 0.5 µg/mL of USP Levodopa RS in Mobile phase.

  **Sample solution:** Nominally 0.125 mg/mL of carbidopa and nominally 0.5 mg/mL of levodopa in Mobile phase from NLT 10 finely powdered Tablets, prepared as follows. Transfer an accurately weighed portion of the powder into a suitable volumetric flask, dissolve in Mobile phase, and pass through a suitable filter.

  **Chromatographic system** (See Chromatography (621), System Suitability.)

  **Mode:** LC

  **Detector:** UV 280 nm

  **Column:** 4.6-mm x 15-cm; 5-µm packing L1

  **Autosampler temperature:** 6°

  **Flow rate:** 1 mL/min

  **Injection volume:** 20 µL

  **Run time:** ▲ NLT 15 (USP41) 6 times the retention time of carbidopa

**System suitability**

**Samples:** System suitability solution, Standard solution, and Sensitivity solution.

[NOTE—For the relative retention times, see ▲ Table 9.]▲ (TBD)

**Suitability requirements**

- **Resolution:** NLT 1.5 between carbidopa and levodopa related compound B, System suitability solution.

  **Relative standard deviation:** NMT 3.0% for both carbidopa and levodopa for five replicate injections, Standard solution.

  **Signal-to-noise ratio:** NLT 10 for carbidopa, Sensitivity solution.

**Analysis**

**Samples:** Standard solution and Sample solution

Calculate the percentage of dihydroxybenzaldehyde, dihydroxyphenylacetone, and any unspecified carbidopa degradant based on the label claim of carbidopa in the portion of Tablets taken:

Result = \( \left( \frac{r_U}{r_s} \right) \times (C_s/C_U) \times (1/F) \times 100 \)

**Acceptance criteria:** See ▲ Table 9.▲ (TBD)

The reporting threshold is 0.05%, relative to the drug substance: ▲ 15 (USP41)
