Esomeprazole Magnesium Delayed-Release Capsules

Type of Posting  Revision Bulletin
Posting Date  26–Jul–2019
Official Date  01–Aug–2019
Expert Committee  Chemical Medicines Monographs 3
Reason for Revision  Compliance

In accordance with the Rules and Procedures of the 2015–2020 Council of Experts, the Chemical Medicines Monographs 3 Expert Committee has revised the Esomeprazole Delayed-Release Capsules monograph. The purpose for the revision is to add Dissolution Test 4 to accommodate FDA-approved drug products with different dissolution conditions and/or tolerances than the existing dissolution tests.

- **Dissolution Test 4** was validated using a Phenomenex Gemini C18 brand 4.6-mm x 15-cm, 5-µm packing L1 column. The typical retention time for esomeprazole is about 4.6 min.

Additionally, USP Esomeprazole Magnesium RS has been added to the USP Reference Standards section and the table numbers in the test for Organic Impurities have been updated.

The Esomeprazole Magnesium Delayed-Release Capsules Revision Bulletin supersedes the currently official monograph.

Should you have any questions, please contact Andrea F. Carney, Scientific Liaison (301-816-8155 or afc@usp.org).
Esomeprazole Magnesium Delayed-Release Capsules

**DEFINITION**
Esomeprazole Magnesium Delayed-Release Capsules contain an amount of Esomeprazole Magnesium equivalent to NLT 90.0% and NMT 110.0% of the labeled amount of esomeprazole (C₇H₁₃N₂O₅S).

**IDENTIFICATION**

- **A.**
  - **Buffer:** Prepare a pH 6.0 phosphate buffer containing 26.6 g/L of dibasic sodium phosphate dihydrate and 55.2 g/L of monobasic sodium phosphate monohydrate in water.
  - **Diluent:** Prepare a pH 11.0 diluent as follows. Dissolve 5.24 g of tribasic sodium phosphate dodecahydrate in water. Add 110 mL of 0.5 M dibasic sodium phosphate solution, and dilute with water to 1000 mL.
  - **Mobile phase:** Transfer 150 mL of acetonitrile and 85 mL of the Buffer to a 1000-mL volumetric flask, and dilute with water to volume.
  - **Standard stock solution:** Prepare a solution containing 0.02 mg/mL of USP Omeprazole RS from the Standard stock solution in water.
  - **Standard solution:** Prepare a solution containing 0.04 mg/mL of USP Omeprazole RS by dissolving a suitable amount first in alcohol, using 20% of the final volume, and then diluting with Diluent to volume.
  - **Sample stock solution:** Transfer 10 mg of USP Omeprazole RS and 110 mL of 0.5 M dibasic sodium phosphate solution, and dilute with water to 1000 mL.
  - **Sample solution:** Prepare a solution containing 0.01 mg/mL of esomeprazole from the Sample stock solution in water.

**ASSAY**

**PROCEDURE**

- **Buffer:** Prepare a pH 7.3 phosphate buffer by mixing 10.5 mL of 1.0 M monobasic sodium phosphate buffer and 60 mL of 0.5 M dibasic sodium phosphate buffer, and diluting with water to 1000 mL.
- **Diluent:** Prepare as directed in Identification test A.
- **Mobile phase:** Mix 350 mL of acetonitrile and 500 mL of the Buffer. Dilute with water to 1000 mL.
- **Standard solution:** Transfer 10 mg of USP Omeprazole RS to a 250-mL volumetric flask, and dissolve in about 10 mL of alcohol. Add 40 mL of Diluent, and dilute with water to volume. This solution contains 0.04 mg/mL of USP Omeprazole RS.
- **Sample stock solution:** Mix the contents of NLT 20 Capsules. Transfer a portion of the Capsule content, equivalent to 20 mg of esomeprazole, to a 100-mL volumetric flask, add 60 mL of Diluent, and shake for 20 min to dissolve the pellets. Sonicate for a few min, if needed, to completely dissolve. Add 20 mL of alcohol, and sonicate for a few min. Cool, and dilute with Diluent to volume. Pass a portion of the solution through a filter of 1-µm pore size.
- **Sample solution:** 0.04 mg/mL of esomeprazole from the Sample stock solution in water. Store this solution protected from light.

**Chromatographic system**
(See Chromatography (621), System Suitability.)

- **Mode:** LC
- **Detector:** UV 302 nm
- **Column:** 4.6-mm × 15-cm; 5-µm packing L1
- **Flow rate:** 1 mL/min
- **Injection size:** 20 µL

**System suitability**

- **Sample:** Standard solution
- **Relative standard deviation:** NMT 2.0%

**Analysis**

- **Samples:** Standard solution and Sample solution

  Calculate the percentage of the labeled amount of esomeprazole (C₇H₁₃N₂O₅S) in the portion of the Capsules taken:

  \[
  \text{Result} = \left( \frac{t_u}{t_s} \right) \times \left( \frac{C_u}{C_s} \right) \times 100
  \]

- \( t_u \) = peak response from the Sample solution
- \( t_s \) = peak response from the Standard solution
- \( C_u \) = concentration of USP Omeprazole RS in the Sample solution (mg/mL)
- \( C_s \) = nominal concentration of esomeprazole in the Sample solution (mg/mL)

**Acceptance criteria:** 90.0%–110.0%

**PERFORMANCE TESTS**

**Dissolution (711)**

- **Test 1**
  - **Medium:** 0.1 N hydrochloric acid; 300 mL. After 2 h, continue with a pH 6.8 phosphate buffer as follows. To the vessel, add 700 mL of 0.086 M dibasic sodium phosphate, and adjust with 2 N hydrochloric acid or 2 N sodium hydroxide, if necessary, to a pH of 6.8 ± 0.05.
  - **Apparatus 2:** 100 rpm
  - **Time:** 30 min in a pH 6.8 phosphate buffer
  - **Standard solution:** Prepare a solution containing 2 mg/mL of USP Omeprazole RS in alcohol. Dilute this solution with pH 6.8 phosphate buffer to obtain a

C211354-M30590-CHM32015 rev.00 20190726
solution containing (L/1000) mg/mL, where L is the label claim, in mg/Capsule. Immediately add 2.0 mL of 0.25 M sodium hydroxide to 10.0 mL of this solution, and mix. [Note—Do not allow the solution to stand before adding the sodium hydroxide solution.]

**Sample solution:** After 30 min in pH 6.8 phosphate buffer, pass a portion of the solution under test through a suitable filter. Transfer 5.0 mL of the filtrate to a suitable glassware containing 1.0 mL of 0.25 M sodium hydroxide. Mix well. Protect from light.

**Buffer, Mobile phase, System suitability, and Chromatographic system:** Proceed as directed in the Assay.

**Analysis**

**Samples:** Standard solution and Sample solution

Calculate the percentage of esomeprazole (C$_{17}$H$_{19}$N$_2$O$_5$S) dissolved:

\[
\text{Result} = \left( \frac{r_u}{r_s} \right) \times \left( \frac{C_s}{L} \right) \times V \times 100
\]

- \(r_u\) = peak response from the Sample solution
- \(r_s\) = peak response from the Standard solution
- \(C_s\) = concentration of the Standard solution (mg/mL)
- \(L\) = label claim (mg/Capsule)
- \(V\) = volume of Medium, 1000 mL

**Tolerances:** NLT 75% (Q) of the labeled amount of esomeprazole (C$_{17}$H$_{19}$N$_2$O$_5$S) is dissolved.

**Test 2:** If the product complies with this test, the labeling indicates that the product meets USP Dissolution Test 2.

**Acid resistance stage**

**Acid stage medium:** 0.1 N hydrochloric acid; 300 mL

**Apparatus 2:** 100 rpm

**Time:** 2 h

**Solution A:** Prepare a 0.05 M ammonium acetate buffer pH 7.6 as follows. Dissolve 3.85 g of ammonium acetate in 1000 mL of water, and adjust with a diluted ammonia solution to a pH of 7.6.

**Solution B:** Use acetonitrile.

**Mobile phase:** See Table 1. Return to original conditions and re-equilibrate the system for 5 min.

**Diluent:** Dissolve 7.6 g of sodium borate in about 800 mL of water. Add 1.0 g of edetate disodium, and adjust with 50% sodium hydroxide solution to a pH of 11.0 ± 0.1. Transfer the solution to a 2000-mL volumetric flask, add 400 mL of dehydrated alcohol, and dilute with water to volume.

**Standard solution:** 0.12 mg/mL of USP Omeprazole RS in Diluent, using sonication at a temperature between 10° and 15° to dissolve. Protect this solution from light.

**Sample solution:** After 2 h, drain the Acid stage medium from each vessel and carefully transfer the pellets into a suitable volumetric flask (use a 100-mL flask for 20-mg Capsules and a 200-mL flask for 40-mg Capsules). Add Diluent to about 70% of the final volume, and sonicate at a temperature between 10° and 15° for about 20 min with intermittent shaking. Allow to cool, dilute with Diluent to volume, mix, and pass through a PVDF or other suitable filter of 0.45-µm or finer pore size. Further dilute 5 mL of this solution with Diluent to 10 mL. Protect this solution from light.

**Chromatographic system**

(See Chromatography (621), System Suitability.)

**Mode:** LC

**Detector:** UV 302 nm

**Column:** 4.6-mm × 15-cm; 5-µm packing L7

**Column temperature:** 30°

**Flow rate:** 1.5 mL/min

**Injection volume:** 20 µL

**System suitability**

**Sample:** Standard solution

**Suitability requirements**

**Tailing factor:** NMT 2.0

**Relative standard deviation:** NMT 2.0%

**Analysis**

**Samples:** Standard solution and Sample solution

Calculate the percentage, \(T\), of the labeled amount of esomeprazole (C$_{17}$H$_{19}$N$_2$O$_5$S) retained:

\[
\text{Result} = \left( \frac{r_u}{r_s} \right) \times C_s \times D \times \left( \frac{1}{L} \right) \times 100
\]

- \(r_u\) = peak response of esomeprazole from the Sample solution
- \(r_s\) = peak response of omeprazole from the Standard solution
- \(C_s\) = concentration of USP Omeprazole RS in the Standard solution (mg/mL)
- \(D\) = dilution factor used in preparing the Sample solution
- \(L\) = label claim (mg/Capsule)

Calculate the percentage of the labeled amount of esomeprazole (C$_{17}$H$_{19}$N$_2$O$_5$S) dissolved:

\[
A = \text{esomeprazole content as a percentage of the labeled amount, as determined in the Assay}
\]

\[
T = \text{percentage of the labeled amount of esomeprazole retained, as determined above}
\]

[Note—If \(T\) is greater than \(A\), then consider the result to be zero.]

**Tolerances:** NMT 10% of the labeled amount of esomeprazole (C$_{17}$H$_{19}$N$_2$O$_5$S) is dissolved.

**Buffer stage**

**Buffer stage medium:** pH 6.8 phosphate buffer.

Proceed as directed in Acid resistance stage with a new set of Capsules. After 2 h with Acid stage medium, continue with a pH 6.8 phosphate buffer as follows. To the vessel, add 700 mL of 0.086 M dibasic sodium phosphate, and adjust with 2 N hydrochloric acid or 2 N sodium hydroxide, if necessary, to a pH of 6.8 ± 0.05.

**Apparatus 2:** 100 rpm

**Time:** 30 min

**Solution A:** Prepare a 0.05 M ammonium acetate buffer pH 7.6 as follows. Dissolve 3.85 g of ammonium acetate in 1000 mL of water, and adjust with a diluted ammonia solution to a pH of 7.6 ± 0.05.

**Mobile phase:** Acetonitrile and Solution A (27:73)

**Diluent:** 0.086 M dibasic sodium phosphate buffer and 0.1 N hydrochloric acid (70:30). Adjust with 2 N
hydrochloric acid or 2 N sodium hydroxide, if necessary, to a pH of 6.8 ± 0.05.

**Standard stock solution:** Prepare a solution containing 0.4 mg/mL of USP Omeprazole RS as follows. Dissolve first in alcohol, using 10% of the final volume, and then dilute with Diluent to volume. Protect this solution from light.

**Test 3:**

<table>

**Sample solution:** After 30 min, pass a portion of the solution under test through a PVDF or other suitable filter of 0.45-µm pore size. Immediately transfer 5.0 mL of the filtrate to a test tube containing 1.0 mL of 0.25 M sodium hydroxide. Mix well. Protect this solution from light.

**Chromatographic system:** Proceed as directed in Acid resistance stage, except use a flow rate of 1.0 mL/min.

**System suitability**

**Sample:** Standard solution

**Suitability requirements**

**Tailing factor:** NMT 2.0

**Relative standard deviation:** NMT 2.0%

**Analysis**

**Samples:** Standard solution and Sample solution

Calculate the percentage of the labeled amount of esomeprazole \((C_17H_{33}N_5O_3S)\) dissolved:

\[
\text{Result} = \left( \frac{r_1}{r_0} \right) \times \left( \frac{C_1}{L} \right) \times D \times V \times 100
\]

- \(r_0\) = peak response from the Sample solution
- \(r_1\) = peak response from the Standard solution
- \(C_1\) = concentration of the Standard solution (mg/mL)
- \(L\) = label claim (mg/Capsule)
- \(D\) = dilution factor used to prepare the Sample solution
- \(V\) = volume of Medium, 1000 mL

**Tolerances:** NLT 80% (Q) of the labeled amount of esomeprazole \((C_17H_{33}N_5O_3S)\) is dissolved.

**Test 3:** If the product complies with this test, the labeling indicates that the product meets USP Dissolution Test 3.

**Acid resistance stage**

**Apparatus 2:** 100 rpm (Acid stage medium)

**Time:** 2 h

**Buffer:** Prepare a 25 mM potassium phosphate buffer pH 8.0 as follows. Dissolve 3.4 g of monobasic potassium phosphate in 1000 mL of water, add 8.0 mL of triethylamine, and adjust with phosphoric acid to a pH of 8.0.

**Solution A:** Buffer: methanol (90:10)

**Solution B:** Acetonitrile: methanol (50:50)

**Mobile phase:** See Table 2.

**Diluent 1:** 0.3 N sodium hydroxide: methanol (10:90)

**Diluent 2:** 0.1 N sodium hydroxide: methanol (75:25)

[NOTE—Protect all standard and sample solutions from light.]

**Standard stock solution:** 0.4 mg/mL of USP Omeprazole RS prepared as follows. Dissolve a suitable amount of USP Omeprazole RS in a suitable volumetric flask containing 30% volume of 0.3 N sodium hydroxide, sonicate as needed to dissolve, and dilute to volume with Diluent 1.

**Standard solution:** Dilute the Standard stock solution with Diluent to obtain a solution containing \((L/1000)\) mg/mL, where \(L\) is the label claim, in mg/Capsule.

**Sample solution:** After 2 h, drain the Acid stage medium from each vessel carefully without losing any pellet. Add 250 mL of 0.25N sodium hydroxide to each vessel and run the dissolution apparatus at 200 rpm for 30 min or until the pellet is completely dissolved. Centrifuge a portion of this solution at 3000 rpm for 10 min. Transfer 5.0 mL of this solution to a 10-mL volumetric flask and dilute to volume with Diluent 2.

**Chromatographic system**

(See Chromatography (621), System Suitability.)

**Mode:** LC

**Detector:** UV 305 nm

**Column:** 4.6-mm × 20-mm; 5-µm packing L1

[NOTE—A suitable L1 guard column may be used.]

**Column temperature:** 30°

**Flow rate:** 1.2 mL/min

**Injection volume:** 10 µL

**System suitability**

**Sample:** Standard solution

**Suitability requirements**

**Tailing factor:** NMT 2.0

**Relative standard deviation:** NMT 2.0%

**Analysis**

**Samples:** Standard solution and Sample solution

Calculate the percentage, \(T\), of the labeled amount of esomeprazole \((C_17H_{33}N_5O_3S)\) retained:

\[
\text{Result} = \left( \frac{r_1}{r_0} \right) \times C_2 \times D \times \left( \frac{1}{L} \right) \times V \times 100
\]

- \(r_0\) = peak response of esomeprazole from the Sample solution
- \(r_1\) = peak response of omeprazole from the Standard solution
- \(C_2\) = concentration of USP Omeprazole RS in the Standard solution (mg/mL)
- \(D\) = dilution factor used to prepare the Sample solution
- \(L\) = label claim (mg/Capsule)
- \(V\) = volume of 0.25 N sodium hydroxide, 250 mL

Calculate the percentage of the labeled amount of esomeprazole \((C_17H_{33}N_5O_3S)\) dissolved:

\[
\text{Result} = A - T
\]
4 Esomeprazole

\[ A = \text{esomeprazole content as a percentage of the labeled amount, as determined in the Assay} \]
\[ T = \text{percentage of the labeled amount of esomeprazole retained, as determined above} \]

[NOTE—If \( T \) is greater than \( A \), then consider the result to be zero.]

Tolerances: NMT 10% of the labeled amount of esomeprazole (\( C_{17}H_{19}N_{3}O_{5}S \)) is dissolved.

Buffer stage:

Buffer stock solution: Prepare a 76 g/L solution of sodium phosphate tribasic in water.

Buffer stage medium: 0.1 N hydrochloric acid: Buffer stock solution (3:1). Adjust with 1 N hydrochloric acid or 1 N sodium hydroxide, if necessary, to pH 6.8.

Apparatus 2: 100 rpm

Time: 30 min

Standard solution: Dilute the Standard stock solution with Buffer stage medium to obtain a solution containing (L/1000) mg/mL, where \( L \) is the label claim, in mg/Capsule. Immediately transfer 5 mL of this solution to a test tube containing 1.0 mL of 0.25 N sodium hydroxide, and mix.

Sample solution: Proceed as directed in Acid resistance stage with a new set of Capsules. After 2 h with Acid stage medium, continue with Buffer stage medium as follows. Completely drain the vessel of Acid stage medium carefully without losing any pellet. Add 1000 mL of preheated Buffer stage medium to each vessel. After 30 min, pass a portion of the solution under test through a full flow or other suitable filter of 10-μm pore size. Immediately transfer 5 mL of the filtrate to a test tube containing 1 mL of 0.25 N sodium hydroxide, and mix.

Chromatographic system: Proceed as directed in Acid resistance stage, except use Injection volume of 20 μL.

Sample solution:

Suitability requirements:

Tailing factor: NMT 2.0

Relative standard deviation: NMT 2.0%

Analysis:

Samples: Standard solution and Sample solution

Calculate the percentage of the labeled amount of esomeprazole (\( C_{17}H_{19}N_{3}O_{5}S \)) dissolved:

Result = \( (r_o/r_i) \times C_i \times D \times (1/L) \times V \times 100 \)

\( r_o \) = peak response from the Sample solution
\( r_i \) = peak response from the Standard solution
\( C_i \) = concentration of USP Esomeprazole RS from the Standard solution (mg/mL)
\( D \) = dilution factor used to prepare the Sample solution
\( L \) = label claim (mg/Capsule)
\( V \) = volume of Buffer stage medium, 1000 mL

Tolerances: NLT 75% (Q) of the labeled amount of esomeprazole (\( C_{17}H_{19}N_{3}O_{5}S \)) is dissolved.

Test 4: If the product complies with this test, the labeling indicates that the product meets USP Dissolution Test 4.

Acid resistance stage

Acid stage medium: 0.1 N hydrochloric acid, 300 mL

Apparatus 2: 100 rpm

Time: 2 h

\[ T = \frac{(A - Q) \times 100}{A} \]

\( A \) = esomeprazole content as a percentage of the labeled amount, as determined in the Assay

\( Q \) = percentage of the labeled amount of esomeprazole retained, as determined above

Tolerances: NLT 75% (Q) of the labeled amount of esomeprazole (\( C_{17}H_{19}N_{3}O_{5}S \)) is dissolved.

Mobile phase: See Table 3.

Buffer stage

Buffer: 23.1 g/L of dibasic sodium phosphate in water

Buffer stage medium: 0.1 N hydrochloric acid and Buffer (30:70). Adjust with 2 N hydrochloric acid or 2 N sodium hydroxide to a pH of 6.8, if necessary, 1000 mL.

Apparatus 2: 100 rpm

Time: 45 min

Solution A: Combine 10.5 mL of 1.0 M monobasic sodium phosphate and 60 mL of 0.5 M dibasic sodium phosphate in a 1-L volumetric flask, and dilute to volume with water. Adjust with 2 N sodium hydroxide or phosphoric acid to a pH of 7.3, if necessary.

Mobile phase: Solution A, acetonitrile, and water (50:35:15)

Diluent: 5.24 g/L of tribasic sodium phosphate in 110 mL of 0.5 M dibasic sodium phosphate and diluted with water to volume. Adjust with 2 N sodium hydroxide or phosphoric acid to a pH of 11.0, if necessary.

System suitability solution: 0.04 mg/mL of USP Omeprazole RS prepared as follows. Transfer 10 mg of USP Omeprazole RS to a 250-mL volumetric flask containing 10 mL of methanol, add 40 mL of Diluent, and dilute with water to volume.

Standard stock solution: 2 mg/mL of USP Omeprazole RS in ethanol

Standard solution: Dilute the Standard stock solution to obtain a solution containing (L/1000 mg/mL), where \( L \) is the label claim, in mg/Capsule with Buffer stage medium. Immediately transfer 10 mL of this solution to a test tube containing 2 mL of 0.25 M sodium hydroxide.

Sample solution: Prepare by placing a new set of Capsules in vessels containing 300 mL of Acid stage medium. After 2 h with Acid stage medium, add 700 mL of Buffer to each vessel and adjust with 2 N hydrochloric acid or 2 N sodium hydroxide to a pH of 6.8. After 45 min immediately withdraw a suitable amount of solution from each vessel and pass through a suitable filter 0.45-μm pore size. Pass the filtrate through a suitable filter of 0.2-μm pore size. Transfer 5 mL of the filtrate to a suitable container containing 1 mL of 0.25 M sodium hydroxide.

- Uniformity of Dosage Units (905): Meet the requirements

IMPURITIES

Change to read:

- Organic Impurities

Buffer: Prepare a pH 7.6 phosphate buffer by mixing 5.2 mL of 1.0 M monobasic sodium phosphate buffer and 63 mL of 0.5 M dibasic sodium phosphate buffer, and diluting with water to 1000 mL.

Solution A: Mix 100 mL of acetonitrile and 100 mL of the Buffer. Dilute with water to 1000 mL.

Solution B: Mix 800 mL of acetonitrile and 10 mL of the Buffer. Dilute with water to 1000 mL.

Mobile phase: See Table ▲ ( RB 1-Aug-2019)

### Table ▲ ( RB 1-Aug-2019)

Diluent: Prepare as directed in Identification test A.

System suitability stock solution: 1 mg/mL each of USP Omeprazole RS and USP Omeprazole Related Compound A RS in methanol

System suitability solution: 1 μg/mL each of USP Omeprazole RS and USP Omeprazole Related Compound A RS from System suitability stock solution, in a mixture of Diluent and water (1:4)
Sample solution: Transfer a portion of the powdered pellets (about 80–90 mg), from the Capsule content, to a 200-mL volumetric flask, add 20 mL of methanol, and shake for 30 s. Add 40 mL of Diluent, shake for 30 s by hand, and sonicate for a few min. Cool, and dilute with water to volume. Pass a portion of the solution through a filter of 0.45-µm pore size. [NOTE—The solution is stable for 3 h if stored protected from light.]

Chromatographic system
(See Chromatography (621), System Suitability.)
Mode: LC
Detector: UV 302 nm
Column: 4.6-mm × 10-cm; 3-µm packing L1
Flow rate: 1 mL/min
Injection size: 20 µL
System suitability
Sample: System suitability solution
[NOTE—See Table ▲ 5 (RB 1-Aug-2019) for the relative retention times.]
Suitability requirements
Resolution: NLT 2.5 between omeprazole related compound A and omeprazole
Analysis
Sample: Sample solution
Calculate the percentage of any individual impurity in the portion of the Capsules taken:

\[
\text{Result} = \left( \frac{r_U}{r_T} \right) \times 100
\]

\(r_U\) = peak response for each impurity
\(r_T\) = sum of all peak responses

Acceptance criteria: See Table ▲ 5 (RB 1-Aug-2019)

\(^a\) Omeprazole related compound A.

ADDITIONAL REQUIREMENTS
• PACKAGING AND STORAGE: Preserve in tight containers. Store at room temperature.
• LABELING: When more than one Dissolution test is given, the labeling states the Dissolution test used only if Test 1 is not used.
