Esomeprazole Magnesium Delayed-Release Capsules

Type of Posting: Revision Bulletin  
Posting Date: 30–Sep–2016  
Official Date: 01–Oct–2016  
Expert Committee: Chemical Medicines Monographs 3  
Reason for Revision: Compliance

In accordance with the Rules and Procedures of the 2015-2020 Council of Experts, the Chemical Medicines Monographs 3 Expert Committee has revised the Esomeprazole Magnesium Delayed-Release Capsules monograph. The purpose for the revision is to add Dissolution Test 2 for a drug product approved by the FDA. The analytical procedures for the Acid Resistance stage and the Buffer stage, although different, were validated using an XTerra RP8 brand of L7 column. The typical retention time for esomeprazole is about 9 minute for the Acid Resistance stage and about 8 min for the Buffer stage.

The Esomeprazole Magnesium Delayed-Release Capsules Revision Bulletin supersedes the currently official monograph. The Revision Bulletin will be incorporated in the First Supplement to USP 40–NF 35.

Should you have any questions, please contact Elena Gonikberg, Ph.D., Principal Scientific Liaison, (301-816-8251 or eg@usp.org).
