

Glycine

Type of Posting	Revision Bulletin
Posting Date	29-Oct-2021
Official Date	1-Nov-2021
Expert Committee	Non-Botanical Dietary Supplements

In accordance with the Rules and Procedures of the Council of Experts, the Non-Botanical Dietary Supplements Expert Committee has revised the Glycine monograph. The limits for monochloroacetic acid and unspecified impurities in the test for *Related Compounds* have been [postponed](#) based on comments received. A status update, previously published for this monograph, can be found [here](#). The purpose of this revision is to add clarity by removing the postponed content from the monograph, so that only the official content is contained within the version marked as “Currently Official” in *USP-NF*, as the postponed content will not be reinstated in the near future. The previously published Proposed IRA has been canceled. A future revision to this monograph will be proposed in the *Pharmacopeial Forum* at a date to be determined.

The Glycine Revision Bulletin supersedes the currently official monograph.

Should you have any questions, please contact Fatkhulla Tadjimukhamedov, Senior Scientist II (301-230-3216 or fkt@usp.org).
