Metoprolol Succinate Extended-Release Tablets

Type of Posting: Notice of Intent to Revise
Posting Date: 27-Dec-2019
Targeted Official Date: To Be Determined, Revision Bulletin
Expert Committee: Chemical Medicines Monographs 2

In accordance with section 7.04 (c) of the 2015–2020 Rules and Procedures of the Council of Experts and the Pending Monograph Guideline, this is to provide notice that the Chemical Medicines Monographs 2 Expert Committee intends to revise the Metoprolol Succinate Extended-Release Tablets monograph.

Based on the supporting data received from a manufacturer awaiting FDA approval, the Expert Committee proposes to add Dissolution Test 6. The revision also necessitates a change in the table numbering in the test for Organic Impurities.

- The analytical procedure in Dissolution Test 6 was validated using a Zorbax SB C8 brand of L7 column from Agilent. The typical retention time for metoprolol succinate is about 2.2 min.

The proposed revision is contingent on FDA approval of a product that meets the proposed monograph specifications. The proposed revision will be published as a Revision Bulletin and an official date will be assigned to coincide as closely as possible with the FDA approval of the associated product.

See below for additional information about the proposed text.¹

Should you have any questions, please contact Donald Min, Senior Scientific Liaison to the Chemical Medicines Monographs 2 Expert Committee (301-230-7457 or ddm@usp.org).

¹ This text is not the official version of a USP–NF monograph and may not reflect the full and accurate contents of the currently official monograph. Please refer to the current edition of the USP–NF for official text.

USP provides this text to indicate changes that we anticipate will be made official once the product subject to this proposed revision under the Pending Monograph Program receives FDA approval. Once FDA approval is granted for the associated revision request, a Revision Bulletin will be posted that will include the changes indicated herein, as well as any changes indicated in the product’s final approval, combined with the text of the monograph as effective on the date of approval. Any revisions made to a monograph under the Pending Monograph Program that are posted without prior publication for comment in the Pharmacopeial Forum must also meet the requirements outlined in the USP Guideline on Use of Accelerated Processes for Revisions to the USP–NF.
Metoprolol Succinate Extended-Release Tablets

**DEFINITION**
Metoprolol Succinate Extended-Release Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of metoprolol succinate \([\text{C}_9 \text{H}_{15} \text{N}_2 \text{O}_6 \cdot \text{C}_4 \text{H}_6 \text{O}_4]\).

**IDENTIFICATION**

**Change to read:**

- **A. SPECTROSCOPIC IDENTIFICATION TESTS** (197), Infrared Spectroscopy: 197K\(\AA\) (CN 1-May-2020)
  
  **Sample solution:** Equivalent to 200 mg of metoprolol succinate from NLT 1 Tablet in a stopped centrifuge tube. Add 40 mL of pH 6.8 phosphate buffer (see Reagents, Indicators, and Solutions—Buffer Solutions) and 40 mL of methylene chloride, and shake for 5 min. Centrifuge, filter, and use the aqueous phase as the Sample solution.
  
  **Sample:** Transfer 3 mL of the Sample solution to a separator. Add 2 mL of ammonium hydroxide, and extract with 20 mL of methylene chloride. Filter the methylene chloride phase. Grind 1 mL of the filtrate with 300 mg of potassium chloride, dry in a current of warm air, and prepare a disk.
  
  **Acceptance criteria:** The IR spectrum of the Sample exhibits maxima only at the same wavelengths as those obtained from a similar preparation of USP Metoprolol Succinate RS (presence of metoprolol).

**Change to read:**

- **B. SPECTROSCOPIC IDENTIFICATION TESTS** (197), Infrared Spectroscopy: 197K\(\AA\) (CN 1-May-2020)
  
  **Sample:** Transfer 5 mL of the Sample solution prepared in Identification A to a glass-stoppered test tube. Add 2 mL of 5 N hydrochloric acid, and extract with 5 mL of ether. Filter the ether phase. Grind 2 mL of the filtrate with 300 mg of potassium bromide, dry in a current of warm air, and prepare a disk.
  
  **Acceptance criteria:** The IR spectrum of the Sample exhibits maxima only at the same wavelengths as those obtained from a similar preparation of succinic acid (presence of succinate).
  
  **C.** The retention time of the major peak of the Sample solution corresponds to that of the Standard solution, as obtained in the Assay.

**ASSAY**

**PROCEDURE**

**Buffer:** Mix 50 mL of 1 M monobasic sodium phosphate and 8.0 mL of 1 M phosphoric acid, and dilute with water to 1000 mL. If necessary, adjust with 1 M monobasic potassium phosphate or 1 M phosphoric acid to a pH of 3.0.

**Mobile phase:** Acetonitrile and Buffer (250:750)

**Standard solution:** 0.05 mg/mL of USP Metoprolol Succinate RS in Mobile phase

**Sample stock solution:** Nominally 1 mg/mL of metoprolol succinate prepared as follows. Transfer a suitable number of Tablets to a suitable volumetric flask, add about 5 mL of water, and allow the Tablets to disintegrate. Add a volume of alcohol to fill 30% of the flask volume, and shake for 30 min. Add a portion of 0.1 N hydrochloric acid to fill 50% of the flask volume, and shake for an additional 30 min. Dilute with 0.1 N hydrochloric acid to volume. Filter, and discard the first 10 mL of the filtrate.

**Sample solution:** Nominally 0.05 mg/mL of metoprolol succinate from the Sample stock solution in Mobile phase

**PERFORMANCE TESTS**

**Change to read:**

- **Dissolution (711)**
  
  **Test 1**
  
  **Medium:** pH 6.8 phosphate buffer (see Reagents, Indicators, and Solutions—Buffer Solutions); 500 mL
  
  **Apparatus 2:** 50 rpm
  
  **Times:** 1, 4, 8, and 20 h
  
  **Buffer, Mobile phase, and Standard solution:** Prepare as directed in the Assay.
  
  **Analysis:** Proceed as directed in the Assay, except use 5.0 mL of a filtered portion of the solution under test as the Sample solution, and use Medium as the blank, in comparison with a Standard solution with a known concentration of USP Metoprolol Succinate RS in the same Medium.
  
  **Acceptance criteria:** See Table 1.

**Table 1**

The percentages of the labeled amount of metoprolol succinate \([\text{C}_9 \text{H}_{15} \text{N}_2 \text{O}_6 \cdot \text{C}_4 \text{H}_6 \text{O}_4]\) dissolved at the times specified conform to Dissolution (711), Acceptance Table 2.

**Test 2:** If the product complies with this test, the labeling indicates that the product meets USP Dissolution Test 2.

**Medium:** Simulated gastric fluid without enzyme, pH 1.2; 500 mL

**Apparatus 2:** 75 rpm

System suitability

Sample: Standard solution

Suitability requirements

Column efficiency: NLT 1500 theoretical plates

Tailing factor: NLT 2.0

Relative standard deviation: NLT 2.0%

Analysis

Samples: Standard solution and Sample solution

Calculate the concentration (C) of metoprolol succinate dissolved in Medium at each time point (i):

\[
\text{Result} = \frac{r_i}{r_s} \times C_i
\]

\(r_i\) = peak response of metoprolol from the Sample solution

\(r_s\) = peak response of metoprolol from the Standard solution

\(C_i\) = concentration of USP Metoprolol Succinate RS in the Standard solution (mg/mL)

Calculate the percentage of the labeled amount of metoprolol succinate [(C<sub>i</sub> x [(V - (3 x V<sub>j</sub>))] + [(C<sub>j</sub> + C<sub>j</sub> + C<sub>i</sub>) x V<sub>j</sub>]) x (1/L)] x 100

Result<sub>i</sub> = (C<sub>i</sub> x [V - (3 x V<sub>j</sub>))] + [(C<sub>j</sub> + C<sub>j</sub> + C<sub>i</sub>) x V<sub>j</sub>]) x (1/L) x 100

\(C_i\) = concentration of metoprolol succinate in the portion of sample withdrawn at time point (i) (mg/mL)

\(V\) = volume of Medium, 500 mL

\(L\) = label claim (mg/Tablet)

\(V_j\) = volume of the Sample solution withdrawn from the Medium (mL)

Tolerances: See Table 4.

Table 4

<table>

</table>

Sample solution: Withdraw a 10-mL aliquot at each time point. Pass the solution under test through a suitable filter of 0.45-µm pore size. Replace the portion withdrawn with an equal volume of Medium.

Chromatographic system

(See Chromatography (621), System Suitability.)

Mode: LC

Detector: UV 223 nm

Column: 4.6-mm x 25-cm; 5-µm packing L1

Column temperature: 30°C

Flow rate: 1.5 mL/min

Injection volume: 5 µL

Run time: NLT 2 times the retention time of metoprolol

System suitability

Sample: Standard solution

Suitability requirements

Tailing factor: NLT 2.0
Relative standard deviation: NMT 2.0%

Analysis

Samples: Standard solution and Sample solution

Calculate the concentration \( C \) of metoprolol succinate dissolved in Medium at each time point \( i \):

\[
\text{Result} = \left( \frac{r_i}{r_s} \right) \times C
\]

- \( r_i \) = peak response of metoprolol from the Sample solution
- \( r_s \) = peak response of metoprolol from the Standard solution
- \( C \) = concentration of USP Metoprolol Succinate RS in the Standard solution (mg/mL)

Calculate the percentage of the labeled amount of metoprolol succinate \([\text{C}15\text{H}2\text{NO}_{3}\text{J}2 \cdot \text{C}6\text{H}1\text{O}_{4}\text{J}]\) dissolved \((Q)\), at each time point \( i \):

\[
\text{Result}_1 = C_1 \times V \times \left( \frac{1}{L} \right) \times 100
\]

\( \text{Result}_2 = \left( \frac{[C_1 \times V] + [C_2 \times V_2]}{[C_1 \times V]} \right) \times \left( \frac{1}{L} \right) \times 100
\]

\( \text{Result}_3 = \left( \frac{[C_1 \times V] + [C_3 \times V_3]}{[C_1 \times V]} \right) \times \left( \frac{1}{L} \right) \times 100
\]

- \( C_1 \) = concentration of metoprolol succinate in the portion of sample withdrawn at time point \( i \) (mg/mL)
- \( V \) = volume of Medium, 500 mL
- \( L \) = label claim (mg/Tablet)
- \( V_i \) = volume of the Sample solution withdrawn from the Medium (mL)

Tolerances: See Table 6.

ADDITIONAL REQUIREMENTS
• PACKAGING AND STORAGE: Preserve in tight containers, and store at controlled room temperature.
• LABELING: Label it to indicate the content of metoprolol succinate and its equivalent, expressed as metoprolol succinate \([C_{15}H_{25}NO_{3})_2 \cdot C_4H_6O_6\]. When more than one Dissolution test is given, the labeling states the Dissolution test used only if Test 1 is not used.
• USP REFERENCE STANDARDS (11)
