Nifedipine Extended-Release Tablets

Type of Posting: Revision Bulletin
Posting Date: 26-Mar-2021
Official Date: 1-Apr-2021
Expert Committee: Small Molecules 2

In accordance with the Rules and Procedures of the Council of Experts, the Small Molecules 2 Expert Committee has revised the Nifedipine Extended-Release Tablets monograph. The purpose for the revision is to add Dissolution Test 15 to accommodate FDA-approved drug products with different dissolution conditions and/or tolerances than the existing dissolution test(s). Existing references to reagents have been updated for consistency with the reagent entry.

• Dissolution Test 15 was validated using the Agilent Zorbax Bonus-RP brand of 4.6-mm x 7.5-cm, 3.5-µm column with packing L60. The typical retention time for nifedipine is about 2.5 min.

The Nifedipine Extended-Release Tablets Revision Bulletin supersedes the currently official monograph.

Should you have any questions, please contact Robyn Fales, Assistant Scientific Liaison (240-221-2047 or rmp@usp.org).
Nifedipine Extended-Release Tablets

DEFINITION
Nifedipine Extended-Release Tablets contain NLT 90.0% and NMT 110.0% of the labeled amount of nifedipine (C_{17}H_{18}N_{2}O_{6}). [Note—Nifedipine, when exposed to daylight and certain wavelengths of artificial light, readily converts to a nitrosophenylpyridine derivative. Exposure to UV light leads to the formation of a nitrophenylpyridine derivative. Perform assays and tests in the dark or under golden fluorescent or other low-actinic light. Use low-actinic glassware.]

IDENTIFICATION
• A. The retention time of the Sample solution corresponds to that of the Standard solution, as obtained in the Assay.
• B. Spectroscopic Identification Tests (197), Ultraviolet-Visible Spectroscopy: 197U
  Standard stock solution and Sample stock solution: Prepare as directed in the Assay.
  Standard solution: 0.02 mg/mL of USP Nifedipine RS in Mobile phase from the Standard stock solution
  Sample solution: Nominally 0.02 mg/mL of nifedipine in Mobile phase from the Sample stock solution

ASSAY
• Procedure
  [Note—Conduct the Assay promptly after preparation of the Standard solution and the Sample solution.]
  Mobile phase: Acetonitrile, methanol, and water (25:25:50)
  Standard stock solution: 1 mg/mL of USP Nifedipine RS in methanol
  Standard solution: 0.1 mg/mL of USP Nifedipine RS from the Standard stock solution in Mobile phase
  Sample stock solution: Dissolve an amount equivalent to 420 mg of nifedipine from powdered Tablets in 130 mL of water in a 250-mL volumetric flask; or transfer the intact Tablets to a 400-mL, high-speed blender cup containing 130 mL of water. Homogenize until a uniform suspension is achieved (about 2 min), and transfer the suspension with the aid of a mixture of acetonitrile and methanol (1:1) to a 250-mL volumetric flask. Dilute with a mixture of acetonitrile and methanol (1:1) to volume, and stir for 30 min. Centrifuge the resulting suspension to obtain a clear supernatant.
  Sample solution: Nominally 0.1 mg/mL of nifedipine prepared as follows. Transfer 3.0 mL of the Sample stock solution to a 50-mL volumetric flask, dilute with Mobile phase to volume, and filter. [Note—Reserve a portion of this solution for use as the Sample solution in the test for Organic Impurities.]

Chromatographic system
(See Chromatography (621), System Suitability.)
  Mode: LC
  Detector: UV 265 nm
  Columns
    Guard: 2.1-mm × 3-cm; packing L1
    Analytical: 4.6-mm × 25-cm; 5-µm packing L1
  Flow rate: 1 mL/min
  Injection volume: 25 µL

System suitability
Sample: Standard solution
Suitability requirements
  Column efficiency: NLT 4000 theoretical plates
Tailing factor: NMT 1.5
Relative standard deviation: NMT 1.0%

Analysis

Samples: Standard solution and Sample solution

Calculate the percentage of the labeled amount of nifedipine (C\textsubscript{17}H\textsubscript{18}N\textsubscript{2}O\textsubscript{6}) in the portion of Tablets taken:

\[
\text{Result} = \left( \frac{r_U}{r_S} \right) \times \left( \frac{C_S}{C_U} \right) \times 100
\]

- \( r_U \) = peak response from the Sample solution
- \( r_S \) = peak response from the Standard solution
- \( C_S \) = concentration of USP Nifedipine RS in the Standard solution (mg/mL)
- \( C_U \) = nominal concentration of nifedipine in the Sample solution (mg/mL)

Acceptance criteria: 90.0%–110.0%

PERFORMANCE TESTS

Change to read:

- **Dissolution** (711)

Test 1: If the product complies with this test, the labeling indicates that it meets USP Dissolution Test 1.

Medium: Water; 50 mL

Apparatus 7: (See Drug Release (724).) 15–30 cycles/min. Do not use the reciprocating disk; use a 25-cm Plexiglas rod, the perimeter of the Tablets being affixed to the rod with a water-insoluble glue. The solution containers are 25-mm test tubes, 150–200 mm in length, and the water bath is maintained at 37 ± 0.5°.

At the end of each specified test interval, the systems are transferred to the next row of new test tubes containing 50 mL of fresh Medium.

Times: 4, 8, 12, 16, 20, and 24 h

Diluent: Methanol and water (1:1)

Standard solution: Transfer 50 mg of USP Nifedipine RS to a 100-mL volumetric flask. Dissolve in 50 mL of methanol, and dilute with water to volume. Quantitatively dilute this solution with Diluent to obtain solutions having suitable known concentrations.

Sample solution: Use portions of the solution under test, passed through a suitable filter of 0.4-µm pore size, suitably diluted with methanol, and stepwise if necessary, with Diluent to obtain a final mixture consisting of equal parts of methanol and water.

Instrumental conditions

(See Ultraviolet-Visible Spectroscopy (857).)

Mode: UV

Analytical wavelength: 338 nm

Cell: 0.5 cm

Analysis: Determine the amount of nifedipine (C\textsubscript{17}H\textsubscript{18}N\textsubscript{2}O\textsubscript{6}) released in the Sample solution at each 4-h interval from UV absorbances. [Note—for the 4-h time period, determine the absorbance at 456 nm, and use this determination to correct for excipient interference.]

Tolerances: See Table 1.
