In accordance with the Rules and Procedures of the Council of Experts, the Small Molecules 4 Expert Committee has revised the Quetiapine Extended-Release Tablets monograph. The purpose of this revision is to add Dissolution Test 13 and Dissolution Test 14 to accommodate FDA-approved drug products with different dissolution conditions and/or tolerances than the existing dissolution test(s). The revision also necessitates a change in the table numbering in the test for Organic Impurities.

- **Dissolution Test 13** was validated using the Hypersil BDS C8 brand of column with L7 packing. The typical retention time for quetiapine is about 4 min.

- **Dissolution Test 14** was validated using the Phenomenex Luna C8 100A brand of column with L7 packing. The typical retention time for quetiapine is about 2.2 min.

The Quetiapine Extended-Release Tablets Revision Bulletin supersedes the currently official monograph.
